Shoreline Treecare

January 17th, 2025 Friday Harbor

Friends of the San Juans

Site Planning & Development

Tree Protection During Construction

- Stem protection
- Mulching and plywood

Overburdening

Highly species and soil specific

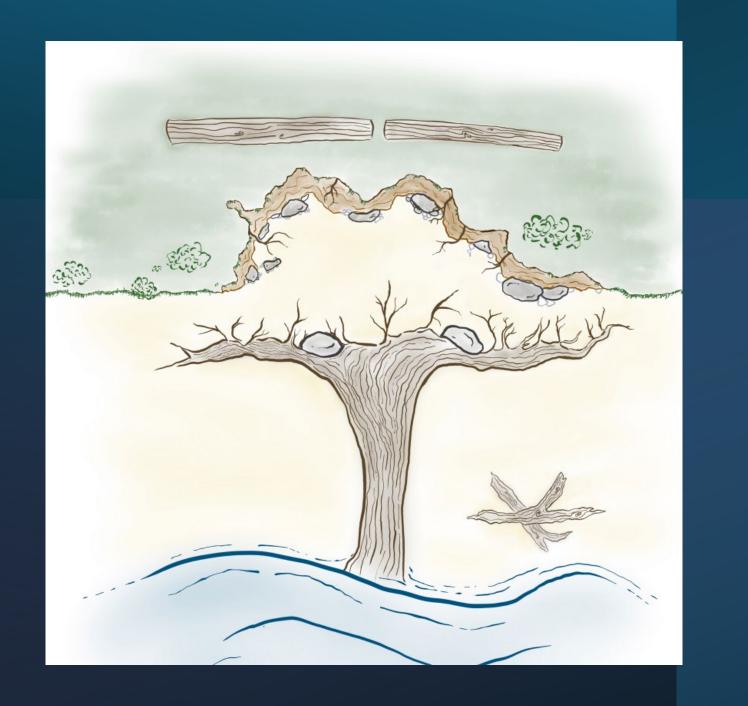

Tree Risk

On Slopes

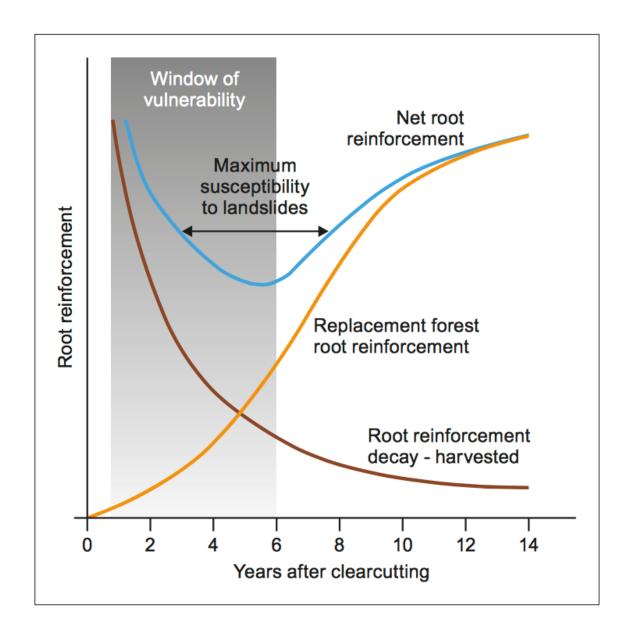

Considering Tree Removal

- Sidle 1991. A conceptual model of changes in root cohesion in response to vegetation management. Journal of Environmental Quality.
- Ziemer 1981. The role of vegetation in the stability of forested slopes. USFS.

Retains most of the tree function, including habitat and most slope stability functions.

Requires annual maintenance.

Will reduce survivability and duration of tree life.

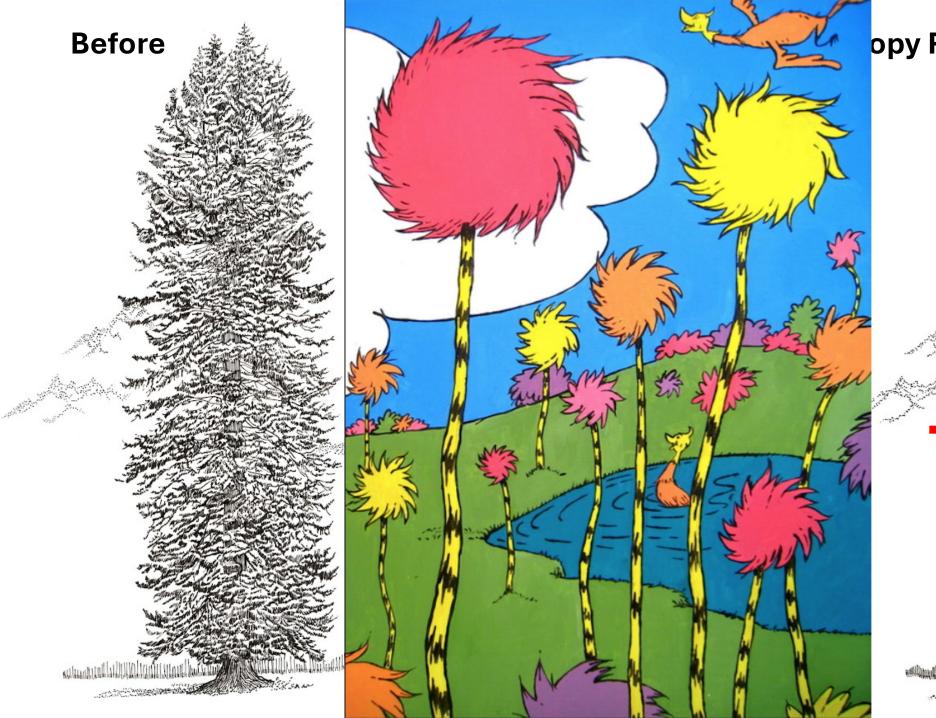

Where to put the branches and logs?

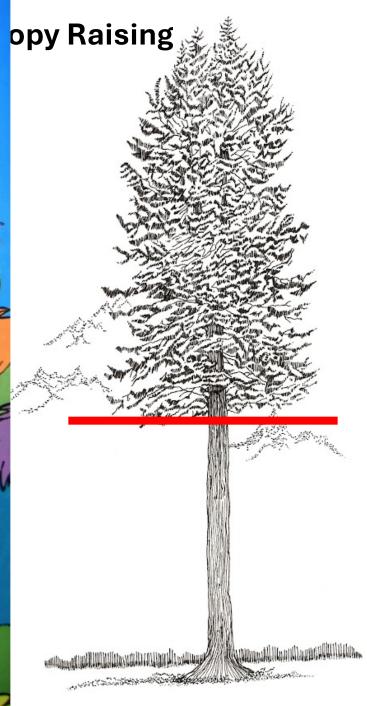

When possible, the **beach**!

Remember:

Let Nature Be: Healthy Beaches Need Debris

Evan Sussman, Sonshine Tree Care

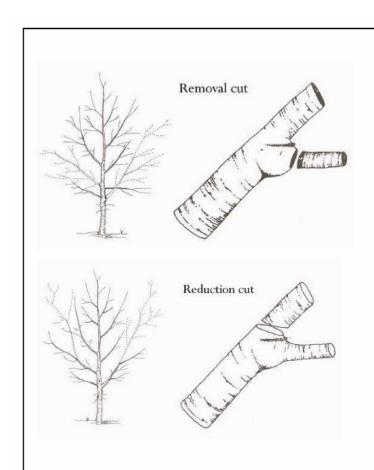

Coppicing and Modified Coppicing

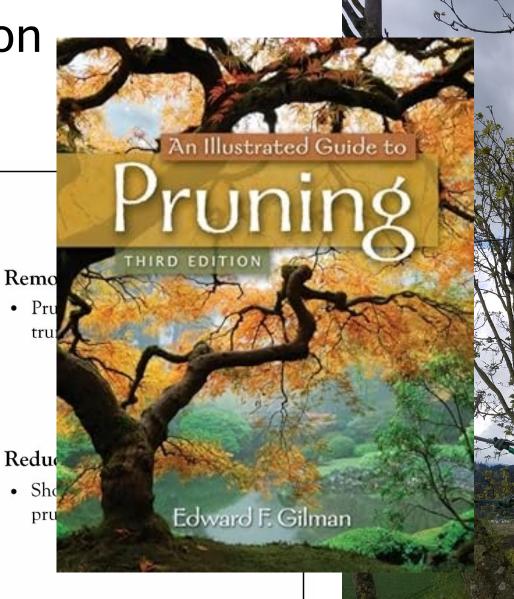

Crown Reduction Pruning

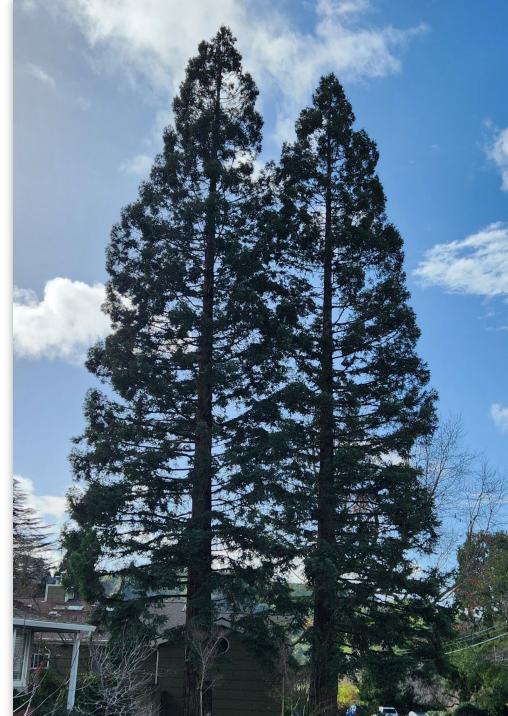

Evan Sussman, BCMA, Sonshine Tree Care

Indiscriminate Tree Topping

Wind Sailing

Limb Tip Reduction

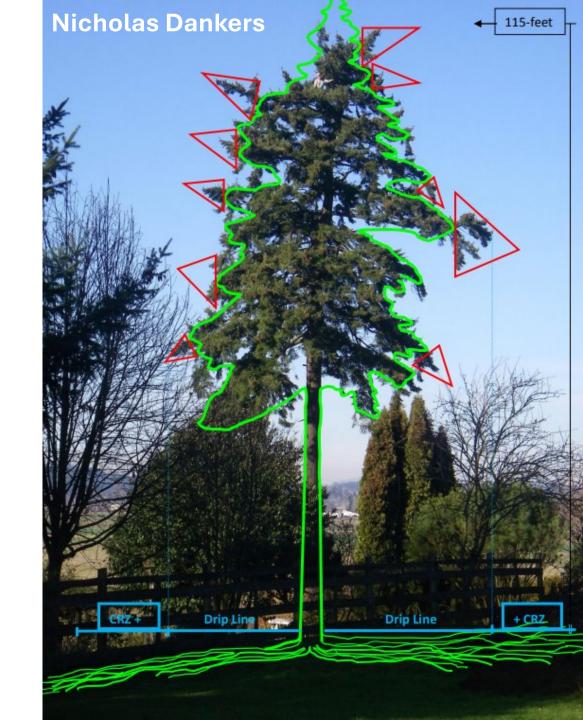

Bring canopy inwards.

Put down the chainsaw.

Cuts no larger than 1-2 inches.

Many small cuts > 1 large cut.

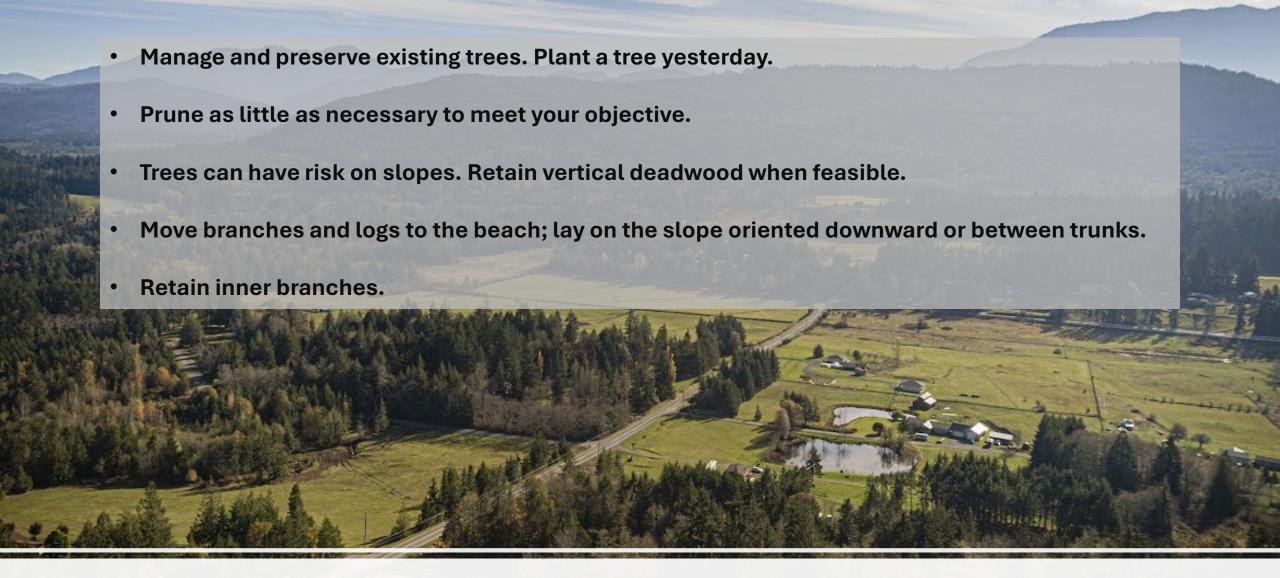

Best time of year to prune?

Summer will process CODIT quicker

Winter will help with fungal spores

Don't prune in late fall.

Recap
